

Group030 AI Records Index

FIT5196 Data Wrangling · Assessment 1 · Semester 2, 2026

This English index identifies each supplied conversational-AI record, its purpose, the affected submission work and the independent checks applied by the group. It does not replace the complete conversation files in `AI_records/`. Each member must confirm that their listed file is complete before signing the separate AI-use declaration.

AI-01 — Xinhang Ren (35134410)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied PDF export
Complete export filename	AI-01.pdf
Record language	Chinese
Purpose	Assignment planning, interpretation of the specification and rubric, and quality-control guidance for the solution, mapping, text functions, EDA and report.
Affected submission work	Group030_solution.ipynb; Group030_source_to_target_mapping.csv; Group030_text_functions.py; Group030_EDA.ipynb; Group030_EDA.pdf; validation register; submission checklist.
Independent verification	Requirements were checked against the official specification and rubric. The final workflow passed 18/18 public text tests, 22/22 student-designed tests and 68/68 validation checks. Both notebooks were rerun in a clean offline marking-style workspace.

AI-02 — Guohou Zhang (35800275) & King Man Chan (36550779)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied PDF export
Complete export filename	AI-02.pdf
Record language	Chinese
Purpose	Development of the validation framework for schema, types, missing values, keys, source row flow, overlap, arithmetic, temporal consistency and text processing.
Affected submission work	Validation and quality-control sections of Group030_solution.ipynb and the validation evidence referred to in the EDA report.
Independent verification	Recommendations were checked against the public data dictionary, source reconciliation counts and executable VAL-* register. The final register contains 68/68 PASS results and reports observed values rather than relying only on hard-coded expected counts.

AI-03 — Yinglin Fang (34814248)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied PDF export
Complete export filename	AI-03.pdf
Record language	Chinese
Purpose	Review of the six-table relational design, observation grain, primary and foreign keys, field allocation, cleaning and JSON/XML reconciliation logic.
Affected submission work	Relational transformations in Group030_solution.ipynb; field lineage in Group030_source_to_target_mapping.csv; schema, key, arithmetic and temporal validation.
Independent verification	The design was checked against the public data dictionary. Executable PK/FK assertions, arithmetic reconciliation and temporal checks passed, and a clean rerun recreated all six standardised tables exactly.

AI-04 — Guohou Zhang (35800275)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied PDF export
Complete export filename	AI-04.pdf
Record language	Chinese
Purpose	Review of bounded regular expressions, Unicode normalisation, multilingual preservation, narrative cleaning and related validation.
Affected submission work	Group030_text_functions.py; text-processing sections of Group030_solution.ipynb; related validation-register entries.
Independent verification	The implementation was checked against the published text contract, 18/18 public cases and 22/22 student-designed edge cases. Multilingual checks confirm that 303 reviews containing non-Latin script remain identified after cleaning.

AI-05 — King Man Chan (36550779)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied PDF export
Complete export filename	AI-05.pdf
Record language	Chinese
Purpose	Design of additional tests for narrative cleaning, order and product reference extraction, promotion extraction and Unicode helper functions.
Affected submission work	Student-designed test section of Group030_solution.ipynb and quality-control evidence for Group030_text_functions.py.
Independent verification	The additional cases were executed through the same expected-versus-actual test harness as the public suite. The final notebook reports 18/18 public cases and 22/22 student-designed cases passing.

AI-06 — Sizhe Hong (35381949)

Tool and model	ChatGPT (OpenAI); exact model not recorded in the supplied HTML export
Complete export filename	AI-06.html
Record language	English
Purpose	Guidance for Task 4 validation and Task 5 EDA, including stable VAL-* IDs, missing-value handling, primary/foreign-key diagnostics, coherent review relationship checks, statistical interpretation and zero-month time-series handling.
Affected submission work	Validation register and quality-control sections of Group030_solution.ipynb; analytical design and interpretation in Group030_EDA.ipynb and Group030_EDA.pdf.
Independent verification	The record separates assignment-stated requirements from assumptions and recommends field-specific checks, expected-versus-actual evidence and row-level relationship diagnostics. Related implementation is covered by the final executable VAL-* register, which reports 68/68 PASS results.
