

Generative AI Use Declaration

FIT5196 Data Wrangling | A1 (15%) | Semester 2, 2026

Important Notice

If any group member used a generative AI or AI-assisted coding/writing tool, the group must:

- 1. Submit complete assignment-related conversation exports in English.
- 2. Submit an English AI index recording the member/tool, export filename, purpose, affected work, and independent verification.

Inline AI completion without chat history must also be declared:

- Record the member/tool, affected files or functions, assistance, and independent verification.
- Do not invent a transcript when no conversational record exists.

If no group member used generative AI, the group must still complete and sign this declaration.

Group Declaration

By signing below, each member confirms that:

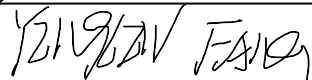

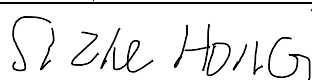

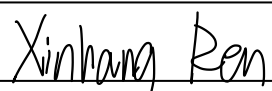

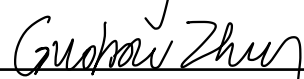

The declaration and submitted records are complete.
When required, complete exports and the AI index are in AI_records/.
The group remains responsible for every submitted item, including AI-assisted work.
AI-assisted work was independently checked, the workflow runs offline, and each member can explain their contribution.

Signatures

Group Number: Group030

Submission: Group030_A1_submission.zip and Group030_EDA.pdf

#	Full Name (printed)	Student ID	Signature	Date

1	King Man Chan	36550779		09/09/2026
2	Yinglin Fang	34814248		09/09/2026
3	Sizhe Hong	35381949		09/09/2026
4	Xinhang Ren	35134410		09/09/2026
5	Guohou Zhang	35800275		09/09/2026

All 4-5 group members must sign. Leave row 5 blank for a four-person group.

AI Records and Verification

Complete this section when any group member used conversational AI or inline AI completion.
Add rows when needed. One complete conversation may support several purposes or submission locations.

Conversational-AI index

Export every complete assignment-related conversation. Do not replace an export with selected prompts, a summary or screenshots.

Record ID	Member, tool/model and complete export filename	Purpose and affected submission file/section	Independent verification
AI-01	Xinhang Ren (35134410); ChatGPT (OpenAI), model not recorded in PDF; AI-01.pdf	Assignment planning, rubric review and quality control for the solution, mapping, text functions, EDA and report.	Checked against the specification and rubric; public tests 18/18, student tests 22/22, validation 68/68, and fresh offline rerun.
AI-02	Guohou Zhang (35800275) & King Man Chan (36550779); ChatGPT (OpenAI), model not recorded in PDF; AI-02.pdf	Validation framework for schema, types, missing values, keys, row flow, overlap, arithmetic, temporal and text checks.	Checked against the data dictionary, source reconciliation counts and executable VAL-* register; final register 68/68 PASS.
AI-03	Yinglin Fang (34814248); ChatGPT (OpenAI), model not recorded in PDF; AI-03.pdf	Six-table relational design, grain, keys, field allocation, cleaning and reconciliation logic.	Checked using PK/FK assertions, arithmetic reconciliation, temporal checks and final table schemas.
AI-04	Guohou Zhang (35800275); ChatGPT (OpenAI), model not recorded in PDF; AI-04.pdf	Regex, Unicode and multilingual text-cleaning recommendations and related validation.	Checked with the published text contract, public tests, student edge cases and multilingual preservation checks.
AI-05	King Man Chan (36550779); ChatGPT (OpenAI), model not recorded in PDF; AI-05.pdf	Student-designed tests for narrative cleaning, reference extraction and Unicode helper functions.	Executed alongside the public suite: public tests 18/18 PASS and student-designed tests 22/22 PASS.
AI-06	Sizhe Hong (35381949); ChatGPT (OpenAI), model not recorded in HTML export; AI-06.html	Task 4 validation and Task 5 EDA guidance: stable VAL-* IDs, missing values, PK/FK diagnostics, coherent review relationships, statistics and zero-month handling.	Related implementation covered by field-specific checks, expected-versus-actual evidence, row-level diagnostics and the final executable VAL-* register (68/68 PASS).

Inline AI completion without chat history

Complete this register when an editor supplied AI-generated inline work but there is no conversational record to export. Do not invent a transcript.

Member and tool/editor	Affected files or functions	Nature of assistance	Independent verification

Independent verification

Suitable evidence includes a named test, comparison against the allocated source, a sampled manual calculation, an official technical reference, a join/cardinality check or a fresh offline rerun. Another AI response is not independent verification.

Submission reminder

Convert the signed declaration to Group030_AI_declaration.pdf. When conversational AI was used, include Group030_AI_index.pdf and every complete export in AI_records/ inside Group030_A1_submission.zip.
